Bounds

< □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > <

# Generalized Frobenius numbers: bounds and average behavior via geometric techniques

Lenny Fukshansky Claremont McKenna College

International meeting on numerical semigroups with applications Levico Terme 2016

#### Integer Knapsack Problem

Let  $N \geq 2$  be an integer,  $\boldsymbol{a} \in \mathbb{Z}_{>0}^N$  with

 $a_1 < \cdots < a_N$ ,  $gcd(a_1, \ldots, a_N) = 1$ ,

and  $b \in \mathbb{Z}_{>0}$ .

Bounds

Average behavior

< □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > <

#### Integer Knapsack Problem

Let  $N \geq 2$  be an integer,  $\boldsymbol{a} \in \mathbb{Z}_{>0}^N$  with

$$a_1 < \cdots < a_N, \ \ \operatorname{gcd}(a_1, \ldots, a_N) = 1,$$

and  $b \in \mathbb{Z}_{>0}$ .

#### The corresponding knapsack polytope is

$$P(\boldsymbol{a},b) = \left\{ \boldsymbol{x} \in \mathbb{R}_{>0}^{N} : \sum_{i=1}^{N} a_{i}x_{i} = b 
ight\}.$$

#### Integer Knapsack Problem

Let 
$$N\geq 2$$
 be an integer,  $oldsymbol{a}\in\mathbb{Z}_{>0}^N$  with

$$a_1 < \cdots < a_N$$
,  $gcd(a_1, \ldots, a_N) = 1$ ,

and  $b \in \mathbb{Z}_{>0}$ .

#### The corresponding knapsack polytope is

$$P(\boldsymbol{a},b) = \left\{ \boldsymbol{x} \in \mathbb{R}_{>0}^{N} : \sum_{i=1}^{N} a_{i}x_{i} = b 
ight\}.$$

Integer Knapsack Problem: Is  $P(a, b) \cap \mathbb{Z}^N = \emptyset$ ?

#### Integer Knapsack Problem

Let 
$$\mathit{N} \geq$$
 2 be an integer,  $\mathit{a} \in \mathbb{Z}_{>0}^{\mathit{N}}$  with

$$a_1 < \cdots < a_N$$
,  $gcd(a_1, \ldots, a_N) = 1$ ,

and  $b \in \mathbb{Z}_{>0}$ .

#### The corresponding knapsack polytope is

$$P(\boldsymbol{a},b) = \left\{ \boldsymbol{x} \in \mathbb{R}_{>0}^{N} : \sum_{i=1}^{N} a_{i}x_{i} = b 
ight\}.$$

Integer Knapsack Problem: Is  $P(a, b) \cap \mathbb{Z}^N = \emptyset$ ?

This problem is known to be NP-complete.

(ロ)、(型)、(E)、(E)、 E) の(の)

#### **Frobenius Problem**

For  $s \in \mathbb{Z}_{\geq 0}$ , the *s*-Frobenius number of *a* is defined to be

$$g_s(\boldsymbol{a}) = \max\left\{b \in \mathbb{Z}_{>0}: \left|P(\boldsymbol{a}, b) \cap \mathbb{Z}^N\right| = s
ight\}.$$

This is well-defined, since  $gcd(a_1, ..., a_N) = 1$ .

#### **Frobenius Problem**

For  $s \in \mathbb{Z}_{\geq 0}$ , the *s*-Frobenius number of *a* is defined to be

$$g_s(\boldsymbol{a}) = \max\left\{b \in \mathbb{Z}_{>0}: \left|P(\boldsymbol{a}, b) \cap \mathbb{Z}^N\right| = s
ight\}.$$

This is well-defined, since  $gcd(a_1, ..., a_N) = 1$ . This was first defined for s = 0 in the lectures of G. Frobenius and for  $s \ge 1$  by M. Beck & S. Robins (2003).

#### **Frobenius Problem**

For  $s \in \mathbb{Z}_{\geq 0}$ , the *s*-Frobenius number of *a* is defined to be

$$g_s(\boldsymbol{a}) = \max\left\{b \in \mathbb{Z}_{>0} : \left|P(\boldsymbol{a}, b) \cap \mathbb{Z}^N\right| = s\right\}.$$

This is well-defined, since  $gcd(a_1, ..., a_N) = 1$ . This was first defined for s = 0 in the lectures of G. Frobenius and for  $s \ge 1$  by M. Beck & S. Robins (2003).

**Frobenius Problem (FP):** Given N and **a** as above, find  $g_0(a)$ .

#### **Frobenius Problem**

For  $s \in \mathbb{Z}_{\geq 0}$ , the *s*-Frobenius number of *a* is defined to be

$$g_s(\boldsymbol{a}) = \max\left\{b \in \mathbb{Z}_{>0} : \left|P(\boldsymbol{a}, b) \cap \mathbb{Z}^N\right| = s\right\}.$$

This is well-defined, since  $gcd(a_1, ..., a_N) = 1$ . This was first defined for s = 0 in the lectures of G. Frobenius and for  $s \ge 1$  by M. Beck & S. Robins (2003).

**Frobenius Problem (FP):** Given N and **a** as above, find  $g_0(a)$ .

#### Theorem 1 (Ramirez-Alfonsin, 1994)

Frobenius problem is NP-hard.

#### **Frobenius Problem**

For  $s \in \mathbb{Z}_{\geq 0}$ , the *s*-Frobenius number of *a* is defined to be

$$g_s(\boldsymbol{a}) = \max\left\{b \in \mathbb{Z}_{>0} : \left|P(\boldsymbol{a}, b) \cap \mathbb{Z}^N\right| = s\right\}.$$

This is well-defined, since  $gcd(a_1, ..., a_N) = 1$ . This was first defined for s = 0 in the lectures of G. Frobenius and for  $s \ge 1$  by M. Beck & S. Robins (2003).

**Frobenius Problem (FP):** Given N and **a** as above, find  $g_0(a)$ .

#### Theorem 1 (Ramirez-Alfonsin, 1994)

Frobenius problem is NP-hard.

#### Theorem 2 (Kannan, 1992)

For each fixed N, the problem of finding the Frobenius number of a given N-tuple is P.

#### In terms of numerical semigroups...

For an integer  $N \geq 2$  and  $\boldsymbol{a} \in \mathbb{Z}_{>0}^N$  with

$$\mathsf{a}_1 < \cdots < \mathsf{a}_{\mathsf{N}}, \ \ \mathsf{gcd}(\mathsf{a}_1,\ldots,\mathsf{a}_{\mathsf{N}}) = 1,$$

the sub-semigroup of  $\mathbb N$  generated by  $\boldsymbol{a} := (a_1, \ldots, a_N)$  is

$$S(\boldsymbol{a}) := \left\{ \sum_{i=1}^{N} a_i x_i : x_1, \ldots, x_N \in \mathbb{Z}_{\geq 0} 
ight\}.$$

## In terms of numerical semigroups...

For an integer  $N \geq 2$  and  $\boldsymbol{a} \in \mathbb{Z}_{>0}^N$  with

$$\mathsf{a}_1 < \cdots < \mathsf{a}_N, \;\; \mathsf{gcd}(\mathsf{a}_1, \dots, \mathsf{a}_N) = 1,$$

the sub-semigroup of  $\mathbb N$  generated by  $\boldsymbol{a}:=(a_1,\ldots,a_N)$  is

$$S(\boldsymbol{a}) := \left\{ \sum_{i=1}^{N} a_i x_i : x_1, \ldots, x_N \in \mathbb{Z}_{\geq 0} \right\}.$$

Set of gaps of S(a) is  $\mathbb{N} \setminus S(a)$ , so  $g_0(a)$  is the largest gap of S(a).

## In terms of numerical semigroups...

For an integer  $N \geq 2$  and  $\boldsymbol{a} \in \mathbb{Z}_{>0}^N$  with

$$\mathsf{a}_1 < \cdots < \mathsf{a}_N, \;\; \mathsf{gcd}(\mathsf{a}_1, \dots, \mathsf{a}_N) = 1,$$

the sub-semigroup of  $\mathbb N$  generated by  $\boldsymbol{a} := (a_1, \dots, a_N)$  is

$$\mathcal{S}(\boldsymbol{a}) := \left\{ \sum_{i=1}^{N} a_i x_i : x_1, \ldots, x_N \in \mathbb{Z}_{\geq 0} \right\}.$$

Set of gaps of  $S(\mathbf{a})$  is  $\mathbb{N} \setminus S(\mathbf{a})$ , so  $g_0(\mathbf{a})$  is the largest gap of  $S(\mathbf{a})$ . More generally,  $g_s(\mathbf{a})$  is the largest  $t \in S(\mathbf{a})$  that has precisely s different representations of the form

$$t = \sum_{i=1}^{N} a_i x_i$$
 for some  $x_1, \ldots, x_N \in \mathbb{Z}_{\geq 0}$

#### **Research Directions**

When N = 2,

$$g_s(a_1,a_2) = (s+1)a_1a_2 - a_1 - a_2.$$

This formula was obtained in 1884 for s = 0 and for  $s \ge 1$  by M. Beck & S. Robins (2003).

▲ロト ▲帰ト ▲ヨト ▲ヨト 三日 - の々ぐ

#### **Research Directions**

When N = 2,

$$g_s(a_1, a_2) = (s+1)a_1a_2 - a_1 - a_2.$$

This formula was obtained in 1884 for s = 0 and for  $s \ge 1$  by M. Beck & S. Robins (2003).

For  $N \ge 3$  there currently are no known *elementary* formulas for the Frobenius numbers.

#### **Research Directions**

When N = 2,

$$g_s(a_1, a_2) = (s+1)a_1a_2 - a_1 - a_2.$$

This formula was obtained in 1884 for s = 0 and for  $s \ge 1$  by M. Beck & S. Robins (2003).

For  $N \ge 3$  there currently are no known *elementary* formulas for the Frobenius numbers.

The literature on FP is vast, including a book by Ramirez-Alfonsin; FP has numerous applications in graph theory, computer science, group theory, coding theory, tilings, etc. Current research on FP includes algorithmic results, formulas for special sequences, theory of numerical semigroups, connections to operations research and discrete geometry, and many other directions.

#### Some Bounds

The two directions that we will focus on in this talk are:

• General bounds on the Frobenius numbers.

◆□▶ ◆□▶ ◆三▶ ◆三▶ 三三 のへぐ

#### Some Bounds

The two directions that we will focus on in this talk are:

- General bounds on the Frobenius numbers.
- Average behavior of Frobenius numbers.

#### Some Bounds

The two directions that we will focus on in this talk are:

- General bounds on the Frobenius numbers.
- Average behavior of Frobenius numbers.

**Lower bounds on**  $g_1$ : Davison (1994) for N = 3 (sharp -  $\sqrt{3}$  cannot be improved):

$$g_0(\boldsymbol{a}) \geq \sqrt{3a_1a_2a_3} - a_1 - a_2 - a_3$$

Aliev & Gruber (2007) for any N:

$$g_0(a) > \left( (N-1)! \prod_{i=1}^N a_i \right)^{rac{1}{N-1}} - \sum_{i=1}^N a_i.$$

◆□▶ ◆□▶ ◆三▶ ◆三▶ 三三 - のへで

## Upper bounds on $g_0$ for $N \ge 3$

Erdös, Graham (1972):

$$g_0(\boldsymbol{a}) \leq 2a_N\left[rac{a_1}{N}
ight] - a_1.$$

Vitek (1975):

$$g_0(\boldsymbol{a}) \leq \left[rac{(\boldsymbol{a}_2-1)(\boldsymbol{a}_N-2)}{2}
ight] - 1.$$

Selmer (1977):

$$g_0(\boldsymbol{a}) \leq 2a_{N-1}\left[rac{a_N}{N}
ight] - a_N.$$

Beck, Diaz, Robins (2002):

$$g_0(a) \leq rac{\sqrt{a_1a_2a_3(a_1+a_2+a_3)}-a_1-a_2-a_3}{2}.$$

#### Kannan's geometric approach

We need some geometric notation.

#### Kannan's geometric approach

We need some geometric notation.

Lattice: 
$$\mathcal{L}_{\boldsymbol{a}} = \left\{ \boldsymbol{x} \in \mathbb{Z}^{N-1} : \sum_{i=1}^{N-1} a_i x_i \equiv 0 \pmod{a_N} \right\}.$$

Convex body: 
$$S_a = \left\{ \boldsymbol{x} \in \mathbb{R}^{N-1}_{\geq 0} : \sum_{i=1}^{N-1} a_i x_i \leq 1 \right\}.$$

Covering radius:  $\mu(S_a, \mathcal{L}_a) = \inf \left\{ t \in \mathbb{R}_{>0} : tS_a + \mathcal{L}_a = \mathbb{R}^{N-1} \right\}.$ 

#### Kannan's geometric approach

We need some geometric notation.

Lattice: 
$$\mathcal{L}_{\boldsymbol{a}} = \left\{ \boldsymbol{x} \in \mathbb{Z}^{N-1} : \sum_{i=1}^{N-1} a_i x_i \equiv 0 \pmod{a_N} \right\}.$$

Convex body: 
$$S_a = \left\{ \mathbf{x} \in \mathbb{R}^{N-1}_{\geq 0} : \sum_{i=1}^{N-1} a_i x_i \leq 1 \right\}.$$

Covering radius:  $\mu(S_a, \mathcal{L}_a) = \inf \left\{ t \in \mathbb{R}_{>0} : tS_a + \mathcal{L}_a = \mathbb{R}^{N-1} \right\}.$ 

Kannan (1992):  $g_0(a) = \mu(S_a, \mathcal{L}_a) - \sum_{i=1}^N a_i$ .

#### Kannan's geometric approach

We need some geometric notation.

Lattice: 
$$\mathcal{L}_{\boldsymbol{a}} = \left\{ \boldsymbol{x} \in \mathbb{Z}^{N-1} : \sum_{i=1}^{N-1} a_i x_i \equiv 0 \pmod{a_N} \right\}.$$

Convex body: 
$$\mathcal{S}_{\boldsymbol{a}} = \left\{ \boldsymbol{x} \in \mathbb{R}_{\geq 0}^{N-1} : \sum_{i=1}^{N-1} a_i x_i \leq 1 \right\}.$$

Covering radius:  $\mu(S_a, \mathcal{L}_a) = \inf \{ t \in \mathbb{R}_{>0} : tS_a + \mathcal{L}_a = \mathbb{R}^{N-1} \}.$ 

Kannan (1992):  $g_0(a) = \mu(S_a, \mathcal{L}_a) - \sum_{i=1}^N a_i$ .

The simplex  $S_a$  is not 0-symmetric, which makes explicit bounds on  $\mu(S_a, \mathcal{L}_a)$  difficult to produce.

## A related geometric approach Lattice: $\Lambda_{a} = \left\{ \mathbf{x} \in \mathbb{Z}^{N} : \sum_{i=1}^{N} a_{i}x_{i} = 0 \right\}.$

**Convex body:** B(R) = ball of radius R > 0 centered at the origin in  $V_a = \text{span}_{\mathbb{R}} \Lambda_a$ .

**Covering radius:**  $R_a = \inf \{ R \in \mathbb{R}_{>0} : B(R) + \Lambda_a = V_a \}$ .

## A related geometric approach Lattice: $\Lambda_a = \left\{ \mathbf{x} \in \mathbb{Z}^N : \sum_{i=1}^N a_i x_i = 0 \right\}.$

**Convex body:** B(R) = ball of radius R > 0 centered at the origin in  $V_a = \text{span}_{\mathbb{R}} \Lambda_a$ .

**Covering radius:**  $R_a = \inf \{ R \in \mathbb{R}_{>0} : B(R) + \Lambda_a = V_a \}.$ 

Theorem 3 (F., Robins, 2007)

$$g_0(\boldsymbol{a}) \leq rac{(N-1)R_{\boldsymbol{a}}}{\|\boldsymbol{a}\|} \sum_{i=1}^N a_i \sqrt{\|\boldsymbol{a}\|^2 - a_i^2}.$$

## A related geometric approach Lattice: $\Lambda_a = \left\{ \mathbf{x} \in \mathbb{Z}^N : \sum_{i=1}^N a_i x_i = 0 \right\}.$

**Convex body:** B(R) = ball of radius R > 0 centered at the origin in  $V_a = \text{span}_{\mathbb{R}} \Lambda_a$ .

**Covering radius:**  $R_a = \inf \{ R \in \mathbb{R}_{>0} : B(R) + \Lambda_a = V_a \}.$ 

Theorem 3 (F., Robins, 2007)

$$g_0(\boldsymbol{a}) \leq rac{(N-1)R_{\boldsymbol{a}}}{\|\boldsymbol{a}\|} \sum_{i=1}^N a_i \sqrt{\|\boldsymbol{a}\|^2 - a_i^2}.$$

This bound is symmetric in all  $a_1, \ldots, a_N$ , unlike the previously known ones. The covering radius  $R_a$  can be bounded by standard techniques in the geometry of numbers.

#### Bounds on $g_s$ for $s \ge 1$

Extending our previous method, we obtain:

Theorem 4 (F., Schürmann, 2011)

$$g_s(\boldsymbol{a}) \gg_N \left( s \prod_{i=1}^{N-1} a_i \right)^{\frac{1}{N-1}},$$
$$g_s(\boldsymbol{a}) \ll_N \max\left\{ \frac{R_{\boldsymbol{a}} \sum_{i=1}^N a_i \sqrt{\|\boldsymbol{a}\|^2 - a_i^2}}{\|\boldsymbol{a}\|}, \left( s \prod_{i=1}^{N-1} a_i \right)^{\frac{1}{N-2}} \right\},$$

-

where the lower bound holds for sufficiently large s.

#### Another *s*-Frobenius number $g_s^*$

Beck & Kifer (2011) defined a related generalized Frobenius number:  $g_s^*(a)$  is the largest t that has at most s different representations of the form

$$t = \sum_{i=1}^{N} a_i x_i$$
 for some  $x_1, \ldots, x_N \in \mathbb{Z}_{\geq 0}$ .

## Another *s*-Frobenius number $g_s^*$

Beck & Kifer (2011) defined a related generalized Frobenius number:  $g_s^*(a)$  is the largest t that has at most s different representations of the form

$$t = \sum_{i=1}^{N} a_i x_i$$
 for some  $x_1, \ldots, x_N \in \mathbb{Z}_{\geq 0}$ .

It is then clear that

$$g_s^*(\boldsymbol{a}) \geq g_s(\boldsymbol{a}),$$

and  $g_0 = g_0^*$ .

## Another *s*-Frobenius number $g_s^*$

Beck & Kifer (2011) defined a related generalized Frobenius number:  $g_s^*(a)$  is the largest t that has at most s different representations of the form

$$t = \sum_{i=1}^{N} a_i x_i$$
 for some  $x_1, \ldots, x_N \in \mathbb{Z}_{\geq 0}$ .

It is then clear that

$$g_s^*(\boldsymbol{a}) \geq g_s(\boldsymbol{a}),$$

and  $g_0 = g_0^*$ .

This may be a more convenient definition of an s-Frobenius number – we will focus on it for the rest of the talk.

#### Bounds on $g_s^*$

We now present bounds on  $g_s^*$ , which have very similar order of magnitude as our previous bounds on  $g_s$ .

Theorem 5 (Aliev, F., Henk (2012))

Let  $N \ge 3$ ,  $s \ge 0$ . Then

$$g_s^*(a) \ge \left((s+1)(N-1)!\prod_{i=1}^{N-1}a_i
ight)^{rac{1}{N-1}} - \sum_{i=1}^{N-1}a_i$$

and

$$g_{s}^{*}(oldsymbol{a}) \leq g_{0}(oldsymbol{a}) + \left(s \; (N-1)! \prod_{i=1}^{N-1} a_{i}
ight)^{rac{1}{N-1}}$$

◆□▶ ◆□▶ ◆三▶ ◆三▶ 三三 のへぐ

#### What should we typically expect?

The investigation of asymptotic behavior of the Frobenius number for a "typical" *N*-tuple  $(a_1, \ldots, a_N)$  was initiated by V. I. Arnold in a series of papers (1999 - 2007).

#### What should we typically expect?

The investigation of asymptotic behavior of the Frobenius number for a "typical" *N*-tuple  $(a_1, \ldots, a_N)$  was initiated by V. I. Arnold in a series of papers (1999 - 2007).

In particular, let  $\Omega_N^1$  be an ensemble of relatively prime positive integer *N*-tuples  $\boldsymbol{a} = (a_1, \ldots, a_N)$  with

$$\Sigma(\mathbf{a}) := a_1 + \cdots + a_N \to \infty.$$

Arnold conjectured that for a "typical" N-tuple **a** from  $\Omega_N^1$ ,

$$g_0(\boldsymbol{a})$$
 grows like  $\Sigma(\boldsymbol{a})^{1+rac{1}{N-1}}$  as  $\Sigma(\boldsymbol{a}) 
ightarrow \infty$ .

#### What should we typically expect?

The investigation of asymptotic behavior of the Frobenius number for a "typical" *N*-tuple  $(a_1, \ldots, a_N)$  was initiated by V. I. Arnold in a series of papers (1999 - 2007).

In particular, let  $\Omega_N^1$  be an ensemble of relatively prime positive integer *N*-tuples  $\boldsymbol{a} = (a_1, \ldots, a_N)$  with

$$\Sigma(\mathbf{a}) := a_1 + \cdots + a_N \to \infty.$$

Arnold conjectured that for a "typical" N-tuple **a** from  $\Omega_N^1$ ,

$$g_0(\boldsymbol{a})$$
 grows like  $\Sigma(\boldsymbol{a})^{1+rac{1}{N-1}}$  as  $\Sigma(\boldsymbol{a}) 
ightarrow \infty$ .

Variants of Arnold's conjecture have been considered by a number of authors, including I. Aliev, J. Bourgain, M. Henk, A. Hinrichs, H. Li, J. Marklof, V. Shchur, W. M. Schmidt, Y. Sinai, A. Strömbergson, C. Ulcigrai, A. Ustinov.

#### Average value estimate for $g_s^*$

#### Theorem 6 (Aliev, F., Henk (2012))

Let  $N \geq 3$ ,  $s \geq 0$ , and let

$$\mathrm{G}(T) = \left\{ oldsymbol{a} \in \mathbb{Z}_{>0}^{N} : \mathrm{gcd}(oldsymbol{a}) = 1, |oldsymbol{a}|_{\infty} \leq T 
ight\}.$$

Let D > 0. Then there exists  $T_0(D)$  such that for all  $T \ge T_0(D)$ , with respect to the uniform probability distribution on G(T),

$$\mathsf{Prob}\left(\frac{g_s^*(\boldsymbol{a})}{\left((s+1)\prod_{i=1}^{N-1}a_i\right)^{\frac{1}{N-1}}} \geq D\right) \ll_N \frac{1}{D^{N-1}}.$$

#### Average value estimate for $g_c^*$

#### Theorem 6 (Aliev, F., Henk (2012))

Let N > 3, s > 0, and let

$$\mathrm{G}(\mathcal{T}) = \left\{ oldsymbol{a} \in \mathbb{Z}_{>0}^{N} : \mathsf{gcd}(oldsymbol{a}) = 1, |oldsymbol{a}|_{\infty} \leq \mathcal{T} 
ight\}.$$

Let D > 0. Then there exists  $T_0(D)$  such that for all  $T \ge T_0(D)$ , with respect to the uniform probability distribution on G(T),

$$\mathsf{Prob}\left(\frac{g_s^*(\boldsymbol{a})}{\left((s+1)\prod_{i=1}^{N-1}a_i\right)^{\frac{1}{N-1}}} \geq D\right) \ll_N \frac{1}{D^{N-1}}.$$

In case of the classical Frobenius number, i.e. when s = 0, this probability estimate has been obtained by H. Li (2011). Our method uses his result. 

#### **Proof Ingredients**

• To prove Theorems 3 and 4, we relate Frobenius numbers to the number of integer lattice points in a certain simplex, and then apply techniques from the geometry of numbers to produce counting estimates.

#### **Proof Ingredients**

- To prove Theorems 3 and 4, we relate Frobenius numbers to the number of integer lattice points in a certain simplex, and then apply techniques from the geometry of numbers to produce counting estimates.
- To prove Theorem 5, we introduce the notion of *s*-covering radius for a convex body with respect to a lattice, generalizing the usual covering radius, and relate *s*-Frobenius numbers to (*s* + 1)-covering radii, analogously to Kannan's formula.

#### **Proof Ingredients**

- To prove Theorems 3 and 4, we relate Frobenius numbers to the number of integer lattice points in a certain simplex, and then apply techniques from the geometry of numbers to produce counting estimates.
- To prove Theorem 5, we introduce the notion of *s*-covering radius for a convex body with respect to a lattice, generalizing the usual covering radius, and relate *s*-Frobenius numbers to (*s* + 1)-covering radii, analogously to Kannan's formula.
- To prove Theorem 6, we use the bounds of Theorem 5 along with H. Li's result for g<sub>0</sub> and the fact that "reverse" arithmetic-geometric mean inequality holds with high probability.
