Guided waves in a nonlinear optical medium: a topological approach

Pedro J. Torres

Departamento de Matemática Aplicada, Universidad de Granada (Spain)

Lisboa, First Iberian Mathematical Meeting Febrero 2007

(日) (日) (日) (日) (日) (日) (日)

Maxwell's equations:

$$\nabla \wedge E = -\frac{1}{c} \frac{\partial B}{\partial t} \qquad \nabla \wedge H = \frac{1}{c} \frac{\partial D}{\partial t}$$
$$\nabla \cdot D = 0 = \nabla \cdot B$$

◆□▶ ◆□▶ ◆□▶ ◆□▶ ● ● ● ●

- $c \equiv$ speed of light in the vacuum
- $E \equiv$ electric field
- $H \equiv$ magnetic field
- $D \equiv$ electric flux density
- $B \equiv$ magnetic flux density

Maxwell's equations:

$$\nabla \wedge E = -\frac{1}{c} \frac{\partial B}{\partial t} \qquad \nabla \wedge H = \frac{1}{c} \frac{\partial D}{\partial t}$$
$$\nabla \cdot D = 0 = \nabla \cdot B$$

It is assumed:

 $H \equiv B$ (non-magnetic medium)

$$E(\mathbf{x},\mathbf{y},\mathbf{z},t) = u(\mathbf{x})\mathbf{e}_2\cos(\mathbf{k}\mathbf{z}-\omega t)$$

$$D(x, y, z, t) = \varepsilon(x, \frac{1}{2}u(x)^2)E(x, y, z, t)$$

where $\varepsilon(x, s)$ is called *dielectric function*.

Physical background

Fixed point problem

 Krasnoselskii fixed point theorem for compact operators in cones os a Banach space

◆□▶ ◆□▶ ◆□▶ ◆□▶ ● ● ● ●

Compactness criterion

Fixed point problem. Green's function

Let $a \in L^{\infty}(\mathbb{R})$ be such that $a_* > 0$ and $b \in L^{\infty}(\mathbb{R}) \cap L^1(\mathbb{R})$. Then, $u \in H^1(\mathbb{R})$ is solution of

$$-\ddot{u}+a(x)u=b(x)f(u)$$

iff it is a fixed point of the operator

$$T: BC(\mathbb{R}) \to H^1(\mathbb{R})$$

$$Tu(x) := \int_{\mathbb{R}} G(x,s)b(s)f(u(s))ds,$$

where G(x, s) is the Green's function of the homogeneous problem

$$\begin{cases} -\ddot{u} + a(x)u = 0, \\ u(-\infty) = 0, u(+\infty) = 0. \end{cases}$$

Definition y properties of G(x, s).

$$G(\mathbf{x},\mathbf{s}) = \begin{cases} u_1(\mathbf{x})u_2(\mathbf{s}), & \alpha < \mathbf{x} \le \mathbf{s} < +\infty \\ u_1(\mathbf{s})u_2(\mathbf{x}), & \alpha < \mathbf{s} \le \mathbf{x} < +\infty \end{cases}$$

where u_1, u_2 are solutions of the homogeneous problem such that $u_1(-\infty) = 0, u_2(+\infty) = 0$. Moreover, u_1, u_2 are positive functions, u_1 increasing and u_2 decreasing.

(日) (日) (日) (日) (日) (日) (日)

Definition y properties of G(x, s).

 u_1, u_2 intersect in a unique point x_0 . Let us define

$$p(x) = \begin{cases} \frac{1}{u_2(x)}, & x \leq x_0, \\ \frac{1}{u_1(x)}, & x > x_0. \end{cases}$$

Properties

(P1) G(x, s) > 0 for all $(x, s) \in \mathbb{R}^2$.

(P2)
$$G(x,s) \leq G(s,s)$$
 for all $(x,s) \in \mathbb{R}^2$.

(P3) Given a compact $P \subset \mathbb{R}$, we define

 $m_1(P) = \min\{u_1(\inf P), u_2(\sup P)\}.$

Then,

 $G(x, s) \ge m_1(P)p(s)G(s, s)$ for all $(x, s) \in P \times \mathbb{R}$.

(P4) $G(s,s)p(s) \ge G(x,s)p(x)$ for all $(x,s) \in \mathbb{R}^2$.

Let $\ensuremath{\mathcal{B}}$ be a Banach space.

Definition

A set $\mathcal{P} \subset \mathcal{B}$ is a cone if it is closed, nonempty, $\mathcal{P} \neq \{0\}$ and given $x, y \in \mathcal{P}, \lambda, \mu \in \mathbb{R}_+$ then $\lambda x + \mu y \in \mathcal{P}$.

Theorem

Let \mathcal{P} be a cone in the Banach space \mathcal{B} . Assume Ω^1, Ω^2 are open bounded subsets of \mathcal{P} (in the relative topology of \mathcal{P}) with $0 \in \Omega^1$ and $\overline{\Omega^1} \subset \Omega^2$. If $T : \overline{\Omega^2} \to \mathcal{P}$ is a completely continuous map satisfying:

- (*H*1) $Tu \neq \lambda u$ for all $u \in \partial_{\mathcal{P}} \Omega^1$ and $\lambda > 1$.
- (*H*2) There exists $e \in \mathcal{P} \setminus \{0\}$ such that $u \neq Tu + \lambda e$ for all $u \in \partial_{\mathcal{P}} \Omega^2$ and all $\lambda > 0$,

Then, *T* has a fixed point in $\overline{\Omega^2} \setminus \Omega^1$.

Proposition

Sea $\Omega \subset BC(\mathbb{R})$ whose functions are equicontinuous in each compact interval of \mathbb{R} . Let us assume that there exists $q \in BC(\mathbb{R})$ such that $\lim_{|x| \to +\infty} q(x) = 0$ and

$$|u(x)| \leq q(x) \qquad \forall x \in \mathbb{R}, u \in \Omega.$$

< □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □

Then, Ω is relatively compact.

Main result.

Theorem 1

Let $[\beta, \gamma]$ be such that $x_0 \in (\beta, \gamma)$, $[\beta, \gamma] \cap Supp(b) \neq \emptyset$. Let $a \in L^{\infty}(\mathbb{R})$, $b \in L^{\infty}(\mathbb{R}) \cap L^1(\mathbb{R})$ be such that $a_* > 0$, $b_* \ge 0$. Besides, $f(s) \ge 0$ para todo $s \ge 0$. In addition suppose that (*i*) There exists r > 0 such that for every $u \in [0, r]$

$$f(u) \sup_{x\in\mathbb{R}} \int_{-\infty}^{\infty} G(x,s)b(s)ds \leq r.$$

(*ii*) There exists R > r > 0 such that for every $u \in [R, \frac{1}{m_1 p_0}R]$

$$f(u)\min_{oldsymbol{x}\in[eta,\gamma]}\int_eta^\gamma G(oldsymbol{x},s)b(s)ds\geq R,$$

where $p_0 = \min_{x \in [\beta, \gamma]} p(x)$.

Then, there exists a positive solution $u \in H^1(\mathbb{R})$ of (1) such that $r \leq ||u|| \leq \frac{1}{m_1 p_0} R$.

• Step 1: Definition of the cone.

$$\mathcal{P} = \left\{ u \in \textit{BC}(\mathbb{R}) \, : \, u(x) \geq 0, \, \min_{y \in [\beta, \gamma]} u(y) \geq m_1 p(x) u(x) ext{ for all } x
ight\}$$

• Step 2: $T(\mathcal{P}) \subset \mathcal{P}$. **Proof.** For all $\tau \in \mathbb{R}$,

$$\begin{split} \min_{x \in [\beta,\gamma]} Tu(x) &= \min_{x \in [\beta,\gamma]} \int_{-\infty}^{+\infty} G(x,s) b(s) f(u(s)) ds \\ &\geq m_1 \int_{-\infty}^{+\infty} p(s) G(s,s) b(s) f(u(s)) ds \\ &\geq m_1 \int_{-\infty}^{+\infty} p(\tau) G(\tau,s) b(s) f(u(s)) ds \\ &= m_1 p(\tau) Tu(\tau), \end{split}$$

 ・

where (P3) and (P4) are used.

• Step 3: *T* is completely continuous. **Proof.** Given a bounded $\Omega \subset \mathcal{P}$, let us prove that $T(\Omega)$ is relatively compact. There is M > 0 such that $||u|| \leq M$ for all $u \in \Omega$.

$$|\mathcal{T}\mathcal{U}(x)| = \left|\int_{\mathbb{R}} G(x,s)b(s)f(u(s))ds\right| \leq M^* \int_{\mathbb{R}} G(x,s)b(s)ds =: q(x)$$

< □ > < 同 > < 三 > < 三 > < 三 > < ○ < ○ </p>

where $M^* = \max_{s \in [0,M]} f(s)$. Since $b \in L^1$, then $q \in H^1$. The compactness criterion concludes the proof.

• Step 4: Krasnoselskii conditions.

(*H*1) Let be $\Omega_1 = \{u \in \mathcal{P} : ||u|| \le r\}$. Given $u \in \partial_{\mathcal{P}}\Omega_1$,

$$Tu(x) \leq M_r \sup_{x \in \mathbb{R}} \int_{-\infty}^{+\infty} G(x,s)b(s)ds \leq r,$$

where $M_r = \max_{s \in [0,r]} f(s)$. Therefore, $Tu \neq \lambda u$ para $\lambda > 1$, $u \in \partial_{\mathcal{P}}\Omega_1$.

< □ > < 同 > < 三 > < 三 > < 三 > < ○ < ○ </p>

• Step 4: Krasnoselskii conditions. (*H*2) Let be $\Omega_2 = \{u \in \mathcal{P} : \min_{y \in [\beta, \gamma]} u(y) < R\}$

 $\overline{\Omega}_1\subset \Omega_2$

If $u \in \partial_{\mathcal{P}} \Omega_2$,

$$R=\min_{y\in [\beta,\gamma]}u(y)\geq m_1p(x)\|u\|\geq m_1p_0\|u\|,$$

therefore

$$R \leq u(x) \leq \frac{R}{m_1 p_0} \ \forall \ x \in [\beta, \gamma].$$

Take $e \in \mathcal{P}$ such that e(x) = 1, $x \in [\beta, \gamma]$. If there exists $\lambda \in (0, 1)$ such that $u = Tu + \lambda e$, given $x \in [\beta, \gamma]$,

$$u(x) = \int_{-\infty}^{+\infty} G(x, s)b(s)f(u(s))ds + \lambda e(x)$$

$$\geq m_{R} \min_{x \in [\beta, \gamma]} \int_{\beta}^{\gamma} G(x, s)b(s)ds + \lambda \geq R + \lambda > R$$

where $m_R = \min_{s \in [R, \frac{R}{m_1 \rho_0}]} f(s)$. This contradicts $R = \min_{y \in [\beta, \gamma]} u(y)$.

$$-\ddot{u}+a(x)u=b(x)f(u)$$

Theorem 2

Under the assumptions of Theorem 1, if:

•
$$a(x) = a(-x), b(x) = b(-x) \quad \forall x,$$

•
$$f(-s) = -f(s) \quad \forall s$$

there exists an odd solution $u \in H^1(\mathbb{R})$, positive in \mathbb{R}^+ such that $r \leq ||u|| \leq \frac{1}{m_1 p_0} R$.

$$-\ddot{u}(x)+k^2u(x)=\frac{\omega^2}{c^2}\varepsilon(x,\frac{1}{2}u(x)^2)u(x)$$

Nonlinear contribution of the dielectric function is isolated with the decomposition

$$\varepsilon_L(\mathbf{x}) = \varepsilon(\mathbf{x}, \mathbf{0}), \qquad \varepsilon_{NL}(\mathbf{x}, \mathbf{s}) = \varepsilon(\mathbf{x}, \mathbf{s}) - \varepsilon_L(\mathbf{x}).$$

For simplicity, it is assumed $\varepsilon_{NL}(x, s) = B(x)F(s)$.

$$-\ddot{u}(x) + (k^2 - \frac{\omega^2}{c^2}\varepsilon_L(x))u(x) = \frac{\omega^2}{c^2}B(x)F(\frac{1}{2}u(x)^2)u(x) \quad (2)$$

Definition

A dielectric function $\varepsilon(x, s) = \varepsilon_L(x) + B(x)F(s)$ is called of Kerr type if *F* is increasing, $B_* \ge 0$, $Supp(B) \neq \emptyset$ and

$$F(0) = 0,$$
 $\lim_{s \to +\infty} F(s) = +\infty.$

(日) (日) (日) (日) (日) (日) (日)

Corollary

Let us assume a dielectric function of Kerr type with $B \in L^1 \cap L^\infty$. If $k^2 > \frac{\omega^2}{c^2} \|\varepsilon_L\|$, then there exists a positive solution $u \in H^1(\mathbb{R})$ of (2). Moreover, if $\varepsilon_L(x), B(x)$ are even functions, there exists an odd solution $\tilde{u} \in H^1(\mathbb{R})$ of (2).

(日) (日) (日) (日) (日) (日) (日)

Proof.

$$a(x) = k^2 - \frac{\omega^2}{c^2} \varepsilon_L(x), \ b(x) = \frac{\omega^2}{c^2} B(x), \ f(s) = F(\frac{1}{2}s^2)s$$

[(*i*)] There exists r > 0 such that

$$f(u) \sup_{\mathbf{x} \in \mathbb{R}} \int_{-\infty}^{\infty} G(\mathbf{x}, s) b(s) ds \leq r \qquad \forall u \in [0, r]$$

This amounts to:

$$F(\frac{1}{2}r^2)\sup_{x\in\mathbb{R}}\int_{-\infty}^{\infty}G(x,s)b(s)ds\leq 1$$

[(*ii*)] There exists R > r > 0 such that

$$f(u) \min_{x \in [\beta, \gamma]} \int_{\beta}^{\gamma} G(x, s) b(s) ds \ge R \qquad \forall u \in [R, \frac{1}{m_1 p_0} R]$$

This amounts to:

$$F(\frac{1}{2}R^2)\min_{x\in[eta,\gamma]}\int_{eta}^{\gamma}G(x,s)b(s)ds\geq 1$$

$$\varepsilon(\mathbf{x}, \mathbf{s}) = \begin{cases} q^2 + b(\mathbf{x})\mathbf{s} & \text{if } |\mathbf{x}| \ge d, \\ q^2 + p^2 & \text{if } |\mathbf{x}| < d, \end{cases}$$

with $b \in L^{\infty}(\mathbb{R}) \cap L^{1}(\mathbb{R})$ positive.

$$arepsilon(\mathbf{x},\mathbf{s}) = \left\{ egin{array}{cc} q^2 + b(\mathbf{x})\mathbf{s} & ext{if } |\mathbf{x}| \geq d, \ q^2 + p^2 & ext{if } |\mathbf{x}| < d, \end{array}
ight.$$

with $b \in L^{\infty}(\mathbb{R}) \cap L^{1}(\mathbb{R})$ positive.

The "limit case" $\varepsilon(x, s) = b(x)s$ is interesting in the context of Bose-Einstein condensates.

Definition

Una dielectric function $\varepsilon(x, s) = \varepsilon_L(x) + B(x)F(s)$ is called saturable if *F* is increasing, $B_* \ge 0$, $Supp(B) \neq \emptyset$ and

$$F(0) = 0, \qquad \lim_{s \to +\infty} F(s) = F_{\infty} < +\infty.$$

$$\varepsilon(x,s) = \varepsilon_L(x) + B(x)\frac{s}{1+s},$$

$$\varepsilon(x,s) = \varepsilon_L(x) + B(x)(1-e^{-s})$$

[C.A. Stuart, Guidance properties of nonlinear planar waveguides, *Arch. Ra-tional Mech. Anal.*, **125** (1993), 145–200.]

◆□▶ ◆□▶ ▲□▶ ▲□▶ ■ ののの

Corollary

Let us assume a saturable dielectric function with $B \in L^1 \cap L^\infty$. If:

- $k^2 > \frac{\omega^2}{c^2} \|\varepsilon_L\|$,
- $\exists [\beta, \gamma]$ such that $x_0 \in (\beta, \gamma)$, $[\beta, \gamma] \cap Supp(B) \neq \emptyset$ and

$$\omega^{2}F_{\infty}\min_{x\in[eta,\gamma]}\int_{eta}^{\gamma}G(x,s)B(s)ds>c^{2},$$

then there exists a positive solution $u \in H^1(\mathbb{R})$ of (2). Moreover, if $\varepsilon_L(x)$, B(x) are even functions, there exists an odd solution $\tilde{u} \in H^1(\mathbb{R})$ of (2).

As a consequence, it is proved the existence of guided waves

$$E(x, y, z, t) = u(x)e_2\cos(kz - \omega t)$$

◆□ ▶ ◆□ ▶ ◆ □ ▶ ◆ □ ▶ ● ● ● ● ●

in saturable media for high values of ω , k.

Branches of solutions in systems controlled by parameters:

$$\varepsilon(\mathbf{x}, \mathbf{s}) = \varepsilon_L(\mathbf{x}) + \lambda \mathbf{B}(\mathbf{x}) \mathbf{F}(\mathbf{s}),$$

Corollary

Let us assume a dielectric function of Kerr type. If $k^2 > \frac{\omega^2}{c^2} \|\varepsilon_L\|$, then for all $\lambda > 0$ there exists a positive solution $u_{\lambda} \in H^1(\mathbb{R})$ of (2). Besides,

$$\lim_{\lambda \to 0^+} \|u_\lambda\| = +\infty, \qquad \lim_{\lambda \to +\infty} \|u_\lambda\| = 0.$$

If $\varepsilon_L(x)$, B(x) are even, then there exists a second branch of odd solutions $\tilde{u}_{\lambda} \in H^1(\mathbb{R})$ with the same behaviour.

Proof. We need r_{λ} , R_{λ} such that

$$\begin{aligned} F(\frac{1}{2}r_{\lambda}^2) &\leq \left(\frac{1}{c^2}\lambda\omega^2\sup_{x\in\mathbb{R}}\int_{-\infty}^{\infty}G(x,s)B(s)ds\right)^{-1} \leq \\ &\leq \left(\frac{1}{c^2}\lambda\omega^2m_1p_0\min_{x\in[\beta,\gamma]}\int_{\beta}^{\gamma}G(x,s)B(s)ds\right)^{-1} \leq F(\frac{1}{2}R_{\lambda}^2). \end{aligned}$$

By using that the nonlinearity is of Kerr type, $r_{\lambda} < R_{\lambda}$ can be chosen such that

$$\lim_{\lambda \to 0^+} r_{\lambda} = +\infty, \qquad \lim_{\lambda \to +\infty} R_{\lambda} = 0.$$

< □ > < 同 > < 三 > < 三 > < 三 > < ○ < ○ </p>

We obtain a branch u_{λ} such that $r_{\lambda} \leq ||u_{\lambda}|| \leq \frac{R_{\lambda}}{m_1 p_0}$.

Corollary

Let us assume a dielectric function is saturable. If $k^2 > \frac{\omega^2}{c^2} \|\varepsilon_L\|$, then there exists $\lambda_0 > 0$ such that for all $\lambda > \lambda_0$ there exists a positive solution $u_{\lambda} \in H^1(\mathbb{R})$ of (2). Besides,

$$\lim_{\lambda\to+\infty}\|u_\lambda\|=0.$$

(日) (日) (日) (日) (日) (日) (日)

If $\varepsilon_L(x)$, B(x) are even, then there exists a second branch of odd solutions $\tilde{u}_{\lambda} \in H^1(\mathbb{R})$ with the same behaviour.

• Extension to systems:

$$\begin{cases} -\ddot{u} + a_1(t)u = b_1(t)(u+v)u^2 \\ -\ddot{v} + a_2(t)v = b_2(t)(u+v)v^2 \end{cases}$$

"Manakov systems"

higher dimensions:

$$-\Delta u + a(t)u = b(t)u^3$$
