## **Mathematical Models with Singularities**

A Zoo of Singular Creatures

Series: Atlantis Briefs in Differential Equations, Vol. 1

- ▶ A collection of models with singularities is presented
- ▶ Each chapter presents the history of the model and the current state of the art
- ▶ Interesting open problems are pointed out as a guide for future research

The book aims to provide an unifying view of a variety (a 'zoo') of mathematical models with some kind of singular nonlinearity, in the sense that it becomes infinite when the state variable approaches a certain point. Up to 11 different concrete models are analyzed in separate chapters. Each chapter starts with a discussion of the basic model and its physical significance. Then the main results and typical proofs are outlined, followed by open problems. Each chapter is closed by a suitable list of references. The book may serve as a guide for researchers interested in the modelling of real world processes.
