

ERRATUM: “A Positive Theory of Immigration Amnesties. (2003) *Economic Letters* 78: 231-239.”

In page 235, Proposition 1 states:

“Proposition 1. *High ability individuals of a given k migrate and low ability individuals of the same k do not, if and only if $\mu > 0$.*”

The authors actually prove that high ability individuals of a given k are more likely to migrate than low ability individuals of the same k if and only if $\mu > 0$. However they do not prove that for a given k , $V_{lh} < 0, V_{ll} < 0, V_{hl} > 0$, and $V_{hh} > 0$ if and only if $\mu > 0$ as the proposition states.

Although it does not change the results and the spirit of the paper I would modestly recommend changing Proposition 1 to the following:

“Proposition 1’. *High ability individuals of a given k are more likely to migrate than low ability individuals of the same k if and only if $\mu > 0$.*”
