**LECTURER(S)**

- Javier Díaz Castro (T*; P*)
- José Manuel Romero Marquez (P*)

*(T*: Theory; P*: Practice)*

**POSTAL ADDRESS, TELEPHONE Nº, E-MAIL ADDRESS**

Department of Physiology, 1st Floor, Faculty of Pharmacy. Phone number: +34 958 243879

Prof. Díaz Castro:
Phone number: +34 958 243884,
Office 151.
E-mail: javierdc@ugr.es
Website: http://www.ugr.es/local/javierdc

Prof. Romero Marquez:
E-mail: romeromarquez@ugr.es

**TUTORING AND MEETINGS**

Tutorships can be consulted at the following link: http://www.ugr.es/~fisiougr/tutorias.php

First term: Monday, Wednesday and Friday: 16:00-18:00 h
Second term: Monday and Thursday: 17:00-19:00 h; Wednesday: 16:00-17:00 h and 18:00-19:00 h

It is recommendable to communicate via e-mail (javierdc@ugr.es) that the student will attend to the tutorship to optimize the meetings and avoid delays due to the attendance of more students.

**DEGREE WITHIN WHICH THE SUBJECT IS TAUGHT**

Degree in Food Science and Technology

**PREREQUISITES and/or RECOMMENDATIONS (if necessary)**

Prerequisites: those necessary to access to the degree, related with the level of formation that the student must acquire to accede to the University.

Recommendations: to have previous basic knowledge (background knowledge of Chemistry, Anatomy and Histology, Biochemistry, Metabolism.

A good standard of English and informatics skills are also required.

**BRIEF ACCOUNT OF THE SUBJECT PROGRAMME (ACCORDING TO THE DEGREE)**

The program has a high degree of coherence and integration and cover a diverse range of topics, while reflecting particular strengths within the biological and life sciences and there is a clear coherence between the different modules. Physiology is a study of the normal functions of cells, organs and systems of the living body, the mechanisms by which they are achieved and the regulation of functional activities to maintain the homeostasis, therefore the program has...
been divided into thematic units just for didactic purposes, but during the course we will integrate all the body systems defining their links to maintain the homeostasis.

**GENERAL AND PARTICULAR ABILITIES**

Physiology is a study of the normal functions of cells, organs and systems of the living body, the mechanisms by which they are achieved and the regulation of functional activities. A firm grasp of its principles is essential not only for the study of successive courses, but also for students’ future professional career after graduation. Selection of the teaching material will be in accordance with the necessity of professional education and will be laid emphasis on basic theories and knowledge of physiology as well as on the training of basic techniques. Attention will also be paid to promote the ability of scientific thinking of the students. In order to foster the students’ ability of studying physiology, we conduct our teaching with several methods, such as self-study, exhibition in small groups and tutoring instead of being given only by lecturer in the classroom. The lifelong learning to obtain more and better competences requires new pedagogical practices and the emergence of new scenarios for the students in where multimedia shall play a predominant role in our program. Therefore, multimedia resources will be using our methodological teaching-learning process in the classroom. Cooperative learning networks will be built and innovative teaching-learning strategies will be used to complement the traditional classes.

**OBJECTIVES (EXPRESSED IN TERMS OF EXPECTED RESULTS OF THE TEACHING PROGRAMME)**

**Cognitive objectives:**
- Understand and analyze the interactions between nervous system, cellular communication and its relation to human homeostasis.
- Study, understand and analyze the physiological roles of all the body systems and its integration to maintain homeostasis.

**Procedural aims:**
- Know properly use terms and concepts of matter and expressed in a correct and accurate.
- Deduct, identify and describe the physiological effects of body systems to maintain a stable, constant condition in the human body.
- Deduct, interpret and evaluate critically experimental results.
- Know the main documentary sources of the discipline of developing the ability to complete and update knowledge in the future.

**Attitudinal objectives:**
- Determine the complex interactions to maintain balance or return systems to functioning within a normal range.
- A scientific approach to the study and explanation of physiological phenomena in the domain of scientific knowledge.

**DETAILED SUBJECT SYLLABUS**

We will use several multimedia instruments during the course to enhance the teaching-learning process of the student. The subject has been designed taking into account the integration concept and cover a diverse range of physiological topics, with a clear coherence between the different modules. Physiology is a study of the normal functions of cells, organs and systems of the living body, the mechanisms by which they are achieved and the regulation of functional activities to maintain the homeostasis, therefore the program has been divided into thematic unit just for didactic purposes, although during the course we will integrate all the body systems, to understand better how they maintain a stable, constant condition.

**THEMATIC UNIT I: INTRODUCTION AND CELL PHYSIOLOGY**

Module 1: Introduction to Physiology. Concept and homeostasis. (0.5h)
Module 2: Cell functioning. Cell membrane. Transport towards cell membrane. (1h)

**THEMATIC UNIT II: NERVOUS SYSTEM**

Module 3: Resting membrane potential and action potential. Excitability. (1.5h)
Module 4: Nervous cells. Synaptic transmission. (1h)
Module 5: Organization of the nervous system. (1h)
Module 6: Physiology of sensory organs. (3h)
Module 7: Motor control. (0.5h)
Module 8: Nervous autonomic system. (2h)
Module 9: Superior functions of the nervous system. (0.5h)
Module 10: Skeletal and visceral muscle physiology. (2h)

THEMATIC UNIT III. BODY FLUIDS AND BLOOD
Module 11: Body Fluids. Blood. (1h)
Module 12: Blood cells. Haematopoiesis (2h)
Module 13: Hemostasis and coagulation. (0.5h)

THEMATIC UNIT IV. ENDOCRINE SYSTEM
Module 14: Neuroendocrine integration. (1.5h)
Module 15: Thyroid gland physiology. (1h)
Module 16: Endocrine regulation of growth and protein metabolism. (1h)
Module 17: Endocrine regulation of glucidic and lipid metabolism. (1.5h)
Module 18: Endocrine regulation of ionic/salt and water balance. (0.5h)
Module 19: Endocrine regulation of calcium and phosphorus metabolism. (1h)

THEMATIC UNIT V. CARDIOVASCULAR SYSTEM
Module 20: The heart. Electrocardiography. (1h)
Module 21: Cardiac cycle and cardiac output. (1.5h)
Module 22: General circulation and microcirculation. (1h)
Module 23: Cardiovascular regulations. (1.5h)

THEMATIC UNIT VI. RESPIRATORY SYSTEM
Module 24: Morphologic and functional structure of the respiratory system. Ventilation. (0.5h)
Module 25: Transport and exchange of respiratory gases. (0.75h)
Module 26: Nervous and chemical control of the respiratory process. (0.75h)

THEMATIC UNIT VII. RENAL SYSTEM
Module 27: Morphologic and functional structure of the renal system. (1h)
Module 28: Urine formation, concentration and dilution. (0.5h)
Module 29: Regulation of the acid-base balance. (0.5)

THEMATIC UNIT VIII. DIGESTIVE SYSTEM
Module 30: Morphologic and functional structure of the digestive system. Motility. (1h)
Module 31: Digestive secretions. Nutrient metabolism (2.5h)
Module 32: Digestion and absorption. (1.5h)

THEMATIC UNIT IX. REPRODUCTIVE FUNCTION
Module 33: Morphologic and functional structure of the reproductive system. (1.5h)
Module 34: Fecundation, childbirth and breastfeeding. (0.5h)

THEMATIC UNIT X. INTEGRATION
Module 35: General adaptation syndrome. (1h)

PRACTICAL LABORATORY CLASSES
Group work sessions in the laboratory supervised by the lecturer. Meaningful construction of knowledge through interaction and student activity. The practical classes at the laboratory will be taught as follows:

<table>
<thead>
<tr>
<th>Practical Session 1</th>
<th>Physical and chemical aspects of the digestive process (1.5h)</th>
</tr>
</thead>
<tbody>
<tr>
<td>Practical Session 2</td>
<td>Blood cell count and morphology by mean of the optical microscope (3h)</td>
</tr>
<tr>
<td>Practical Session 3</td>
<td>Respiratory system assessment by mean of spirometry (1.5h)</td>
</tr>
<tr>
<td>Practical Session 4</td>
<td>Blood Pressure assessment completed with a software simulation. (1.5h)</td>
</tr>
<tr>
<td>Practical Session 5</td>
<td>Glycem profile (1.5h)</td>
</tr>
<tr>
<td>Practical Session 6</td>
<td>Functional anatomy of the human body, (1.5h)</td>
</tr>
<tr>
<td>Practical Session 7</td>
<td>Blood groups and rh study and assessment, (1.5h)</td>
</tr>
</tbody>
</table>

**SYSTEM FOR ASSESSING THE ACQUISITION OF THE COMPETENCES AND KNOWLEDGE**

I. Continuous Assessment

This is the default system. Continuous Assessment includes several theory exams which will take place on dates scheduled by the Faculty in coordination with the other subjects offered in the term. Prior to the exam, the lecturer will describe the structure and type of exam questions. Coursework performed by the students (essays, presentations, seminars...) as well as regular attendance and class participation will be also assessed.

The final mark will be calculated according to the following:

- Theory: 70%
- Laboratory practice: 10%
- Coursework (presentations, seminars, etc.): 10%
- Attendance to theoretical classes: 10%

A minimum mark of 5 (out of 10) in both the theory and laboratory practice sections must be obtained in order to pass the subject.

II. Single Final Assessment

According to the Students Assessment and Qualification Policy of the University of Granada (adopted by the Governing Council on Oct 26, 2016), those students who cannot follow the continuous assessment system due to working, health or disability issues (or any other reason appropriately justified) can apply for a Single Final Assessment. For this purpose, the student will submit a formal request to the Director (Head) of the Department, arguing and proving (with documented evidence) the reason for not being able to follow the continuous system. The submission deadline will be 2 weeks after the beginning of the lectures. In extraordinary circumstances, the starting date for counting the 2-week period will be the enrolment date (policy NCG78/9) and, in this case, the student will have to include the proof of enrolment date when making the request. After ten days without the student receiving a written reply from the Director of the Department, it will be understood that the request has been deemed. In case of denial, the student may file, within one month, an appeal to the Rector, who may delegate this task to the Dean or Director of the Centre, exhausting the administrative proceedings.

For students in the Single Final Assessment system, the final mark will be calculated according to the following:

- Theory: 90%
- Laboratory practice: 10%

**READING**
### Print Books on Physiology

- Anatomy & physiology / Gary A. Thibodeau, Kevin T. Patton. REF QP34.5 .S4 2003
- Appleton & Lange review of physiology / David G. Penney. QP40 .P44 2004
- Color atlas of physiology / Agamemnon Despopoulos. REF QP34.5 .S5313 2003
- Human physiology / Stuart Ira Fox. REF QP34.5 .F68 2004
- Human physiology: from cells to systems / Laurelee Sherwood. REF QP34.5 .S48 2004
- Physiology / [edited by] Robert M. Berne (et al.). REF QP34.5 .P496 2004
- Principles of anatomy and physiology / Gerard J. Tortora, Sandra Reynolds Grabowski. REF QP34.5 .T67 2003

### Print Journals

- American Journal of Physiology.
- Canadian Journal of Applied Physiology.
- European Journal of Applied Physiology.
- Annual Review of Physiology.
- Handbook of Physiology.
- News in Physiological Reviews.

- Journal of Physiology (Free Medical Journals)
- The Journal of General Physiology (Free Medical Journal)

### TUTORING

Personalized and small group attention. Continuous instruction and/or orientation carried out by the lecturer for the purpose of reviewing and discussing the materials and topics presented in lectures, seminars, readings, writing papers and of course to answer questions related with the subject.
In order to pass the subject, it will be an indispensable requisite, both in the Continuous and in the Single Final Assessment systems, to have a minimum score of 5 points out of 10 in the theory as well as in the laboratory practice parts. In no case the marks obtained in other components of the Continuous Assessment system (coursework and presentations, assistance to theoretical classes, or any other evaluable component that may be mentioned in the Subject Guide), will serve to pass the subject and will only contribute to the final mark once the theoretical and practical parts have been passed.

This program offers a complete introduction to understanding the mechanisms that underlie normal tissue function, at the molecular, cellular and whole human levels. The current guide lists sources of information for the subject “Human and Cell Physiology”. It is not inclusive, but is meant to provide a starting place when you are looking for information. All the lectures will be taught in Spanish, however the lecturer has a good standard of English and all the comments/questions and meetings with the lecturer can be made and answered in English. The exams also can be made in English. For additional information, please talk directly with the lecturer.

In addition, the Department of Physiology offers a complete undergraduate degree program in Physiology. At postgraduate level, we offer a suite of leading programs in Human & Applied Physiology and Human Nutrition (all of them with quality/excellence mentions).
